## Black Hole

A black hole is a region of spacetime where gravity is so strong that nothing – no particles or even electromagnetic radiation such as light – can escape from it. The only light emitted is that of the incandescent gas that revolves around it before disappearing into the darkness.

Black Hole reproduces this incandescent gaseous light which represents the only element that allows us to identify a black hole in the universe, one of the most mysterious celestial bodies that have always made us reflect on our existence.

An increased height and a new generation fixed optical body allow you to view the light projection in large dimensions without compromising shape and concept.

### Material

Black anodized aluminium, iron and glass

### Power

8 Watt - Dimmable

### Dimensions

H180cm

### Halo colors

Black Hole
