

Fluire series

Designed by Oliver Schick, Germany

The Fluire lamps are designed by Oliver Schick and have a striking and enigmatic expression. The centre light source has a downward direction but also glows through the outer glass layer to create an interesting, layered effect and a gradation of brightness, transparency and colour.

Meet the designer

Oliver Schick was born in the small German town, Darmstadt. A town with an artistic cultural background, that has since grown as a vivid inspiration in his work. His design approach and aesthetic are to fuse simplistic ideas with grand stories that create a mood or feeling in the user and viewer. This clearly comes to show in his many beautiful projects, where minor changes and unexpected details add a lively character and dimensions to each design. His aim is to design products with a timeless character that is easy to understand and decode. Design should be easy to use, and the idea easily communicated to the viewer and user without becoming trivial or freed from identity. He believes that good design should tell a story, and not only fulfill a need, striking a beautiful balance between usage of the design and the story it communicates so well.
