EPIC DINING, LOUNGE & COFFEE TABLES

x1

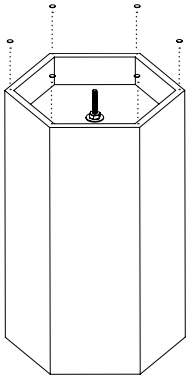

x1

x6

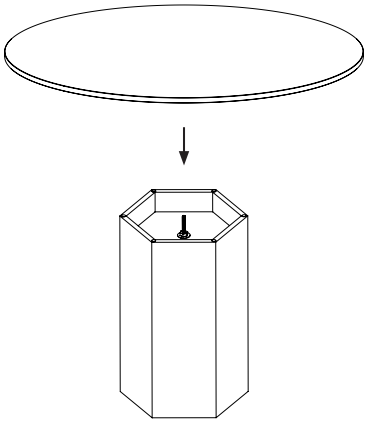

1.

Place the column with the bolt facing up.
Add the bumpers on the corners of the column.

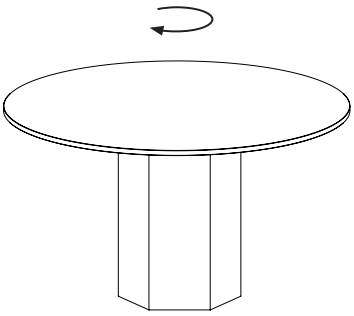

2.

Lift the tabletop onto the column. (Due to the weight of the tabletop it would be ideal if two people handle the lifting and a third person guides the tabletop in place).

3.

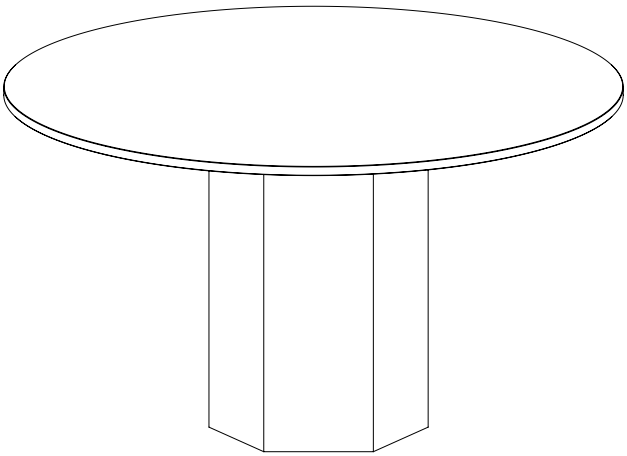

Screw the tabletop onto the bolt in the middle.

CAUTION: DO NOT LIFT TABLE BY TOP!

DO NOT lift the table only by the tabletop. When moving the table, dismount the tabletop from the column.

Do not overtighten the top. Once it reaches the bumpers it does not need to be tightened more.

CARE INSTRUCTIONS

STONE

All GUBI's stone tabletops get a protective treatment before they are sent to the customer. Stone is a natural material and as such it has variations in tone, colour, granularity and pattern. Because of this, a sample may not exactly match a slab or finished product. The samples should give a general idea of the colour, finish and pattern of the stone you choose.
All stones have veining and crystallizations that can appear to be cracks or pits but are actually a natural property of the stone. Stone forms over thousands if not millions of years. These slow processes lead to many variations in structure, colour and pattern. It is precisely these variations that make stone such an appealing material.

DAILY CLEANING

Normal cleaning is done by wiping the surface with a damp soft cloth, then wipe dry. The stones do not tolerate acidic liquid such as vinegar, lemon juice or wine due to the risk of staining. Stains such as these may be impossible to remove. In case of spilling something acidic on the marble top, immediately wash away! Do not use scouring pads, acidic detergents or abrasive cleaners as this may damage the surface.
Stone tops require some maintenance every 8-12 months, depending on the type of use. This maintenance can be done with a commercial product, by following the instructions included in the product.

HEAT STRESS

All GUBI's stone tabletops can withstand heat for short periods, but doesn't tolerate extremely high temperatures. Glowing hot cookware directly from the stove can mark or damage surface. This will show as a spot and cracks can also appear. In such cases please use a trivet. To avoid marking or scratching the surface, avoid pulling abrasive objects across the stone surface.
